---

## Summary

A tech-driven Project Manager passionate about planning, organizing, and leading teams to deliver impactful digital solutions. With a strong foundation in software development, I bridge the gap between technical teams and project stakeholders, ensuring clarity, efficiency, and successful outcomes. I am eager to apply my unique blend of managerial and technical skills to solve real-world problems and contribute to high-impact projects.

---

## Core Competencies

### Project Management

Project Planning & Coordination  
Agile / Scrum Basics  
Task & Resource Management  
Communication & Leadership  
Problem Solving & Risk Management

### Technical Knowledge

**Languages:** HTML, CSS, JavaScript, Python, TypeScript  
**Frameworks:** Next.js, React, Rails, SASS  
**Tools:** Git, GitHub, VS Code

---

## Professional Experience

### Freelance Project Manager & Developer

**Self-Employed** | 2025 - Present

Managed web development projects from concept to completion, serving as the primary point of contact for clients.

Translated client requirements into actionable tasks for development, creating project roadmaps and timelines.

Utilized technical background to facilitate clear communication between stakeholders and technical contributors.

---

## Managed Projects

### Client Work

## Jelani-Africa (Insurance Agency)

- **Goal:** Establish a professional online presence for an emerging insurance agency.
- **My Role:** Led the project from consultation to deployment, defining scope, creating wireframes, developing the full-stack application, and managing client feedback.
- **Outcome:** Delivered a responsive, professional website that enhanced brand credibility and provided a clear channel for customer inquiries.

### Personal Projects

## Machines

- **Goal:** Build an online marketplace for buying and selling vehicles.
- **My Role:** Defined project scope, structured development tasks into sprints, tracked progress, and ensured core functionality (CRUD operations) was correctly implemented.
- **Outcome:** Completed a full frontend prototype simulating real-world product listing and management features.

## Brain Freeze

- **Goal:** Create a colorful, user-friendly e-commerce site for an ice cream brand.
- **My Role:** Planned project milestones, managed content creation and frontend structure, and coordinated testing and feature rollout.
- **Outcome:** Delivered a responsive website with product categories, a checkout flow, and a smooth user experience.

## Expense Tracker

- **Goal:** Build a lightweight expense tracker for clear visualization of income versus expenses.
- **My Role:** Outlined project requirements with a focus on simplicity, and managed the development to ensure an intuitive interface for logging transactions.
- **Outcome:** A simple tool that empowers users to take control of their budget and promotes financial awareness.

### Education

---

## Software Engineering Bootcamp

### Moringa School

Completed an intensive, full-time program focused on full-stack development, covering CS fundamentals, front-end frameworks, and back-end technologies. View my portfolio and certificate at [tjay-earl-portfolio.vercel.app](https://tjay-earl-portfolio.vercel.app).
